

Our Services

Natural Hazards Information Assessment and Management

At PDP we provide specialist expertise in hazards information management. A combination of technical expertise on natural hazard processes and a sound understanding of the uses of natural hazards information ensures the best solution for projects.

Hazards related services that we provide include:

- ▶ Hazards register and database design
- ▶ Hazards register updating and auditing
- ▶ Verification of existing hazards information
- ▶ Hazards information adequacy assessments
- ▶ Comparison of hazards risk with regulatory requirements
- ▶ Risk minimisation planning
- ▶ Hazards information summaries and presentations
- ▶ Peer review

Typical PDP projects:

- ▶ Design of new hazards registers for local councils, including individual hazards information sheet for hazards data, a hazards database linked to LIM/PIM production and a hardcopy hazards register report. Existing reports, Council files and databases as well as intellectual information used to set up the hazards database.
- ▶ Assessment of reliability of hazards information in an existing local council's hazards register with respect to inclusion of information on LIMs/PIMs and the council's legal obligations.
- ▶ Assessment of the adequacy of hazards information available to a district council, with regard to assessing the effects and mitigation of hazards in the district. Priorities for gathering further hazards information based on council/community priorities and areas with development pressure.

Contact us for more information on our hazard related services or to discuss how we can help you with your project.
