

Our Services

Environmental Management and Environmental Auditing

At PDP we provide specialist services in the development of Environmental Management Systems (EMS) and in the undertaking of environmental audits.

EMS and auditing services that we provide include:

- › Development of corporate environmental policy
- › Identification of “gaps” in existing management systems
- › Identification of significant environmental effects and legal requirements
- › Environmental audits (e.g. to assess compliance with statutory and other requirements for pre-purchase inspections and due diligence tests)
- › Development of objectives, targets and environmental programmes to improve environmental performance
- › Development of procedures to implement an EMS
- › Environmental training for staff and contractors
- › Carbon management services
- › Developing solutions for sustainable development

Typical PDP projects:

- › Development of EMSs including assistance in developing corporate environmental policies, environmental management training, legislative review, environmental objectives, targets and procedures and EMS manuals.
- › Produced national guidelines & provided EMS training to local authorities on the development & the implementation of ISO14001 EMS.
- › Development of an EMS including “gap” analysis and initial review for meat processing plant.
- › Assistance with development of Corporate Environmental Strategies.
- › Environmental characterisation for lead contamination to enable financing for property transfer. Feasibility assessment of remedial options.
- › Factory pre-purchase due diligence audit of two sites in New Zealand to ASTM standard.

Contact us for more information on our EMS and auditing services or to discuss how we can help you with your project.
